1948年12月10日，联合国大会通过并颁布《世界人权宣言》。这一具有历史意义的《宣言》颁布后，大会要求所有会员国广为宣传，并且"不分国家或领土的政治地位,主要在各级学校和其他教育机构加以传播、展示、阅读和阐述。"《宣言》全文如下：

Form Recognizer API (v2.1-preview.1)

Form Recognizer extracts information from forms and images into structured data. It includes the following options:

- Form - Extracts information from forms (PDFs and images) into structured data based on a model created from a set of representative training forms. Form Recognizer learns the structure of your forms to intelligently extract text and data. It ingests text from forms, applies machine learning technology to identify keys, tables, and fields, and then outputs structured data that includes the relationships within the original file.
- Receipt - Detects and extracts data from receipts using optical character recognition (OCR) and our receipt model, enabling you to easily extract structured data from receipts such as merchant name, merchant phone number, transaction date, transaction total, and more.
- Business Card - Detects and extracts data from business cards using optical character recognition (OCR) and our business card model, enabling you to easily extract structured data from business cards such as contact names, company names, phone numbers, emails, and more.
- Layout - Extracts text and table structure from documents using optical character recognition (OCR).
